Problem

Portal Laptop

Team 13: Jeff, Zach, Aryan, Roshan, Mickey, MJay

Why Portal Laptop?

1

Seamless

An easier setup process than any other remote desktop solution on the market.

2

Performant

Imperceptible latency across long distances, just as if a user was using their desktop locally.

3

Secure

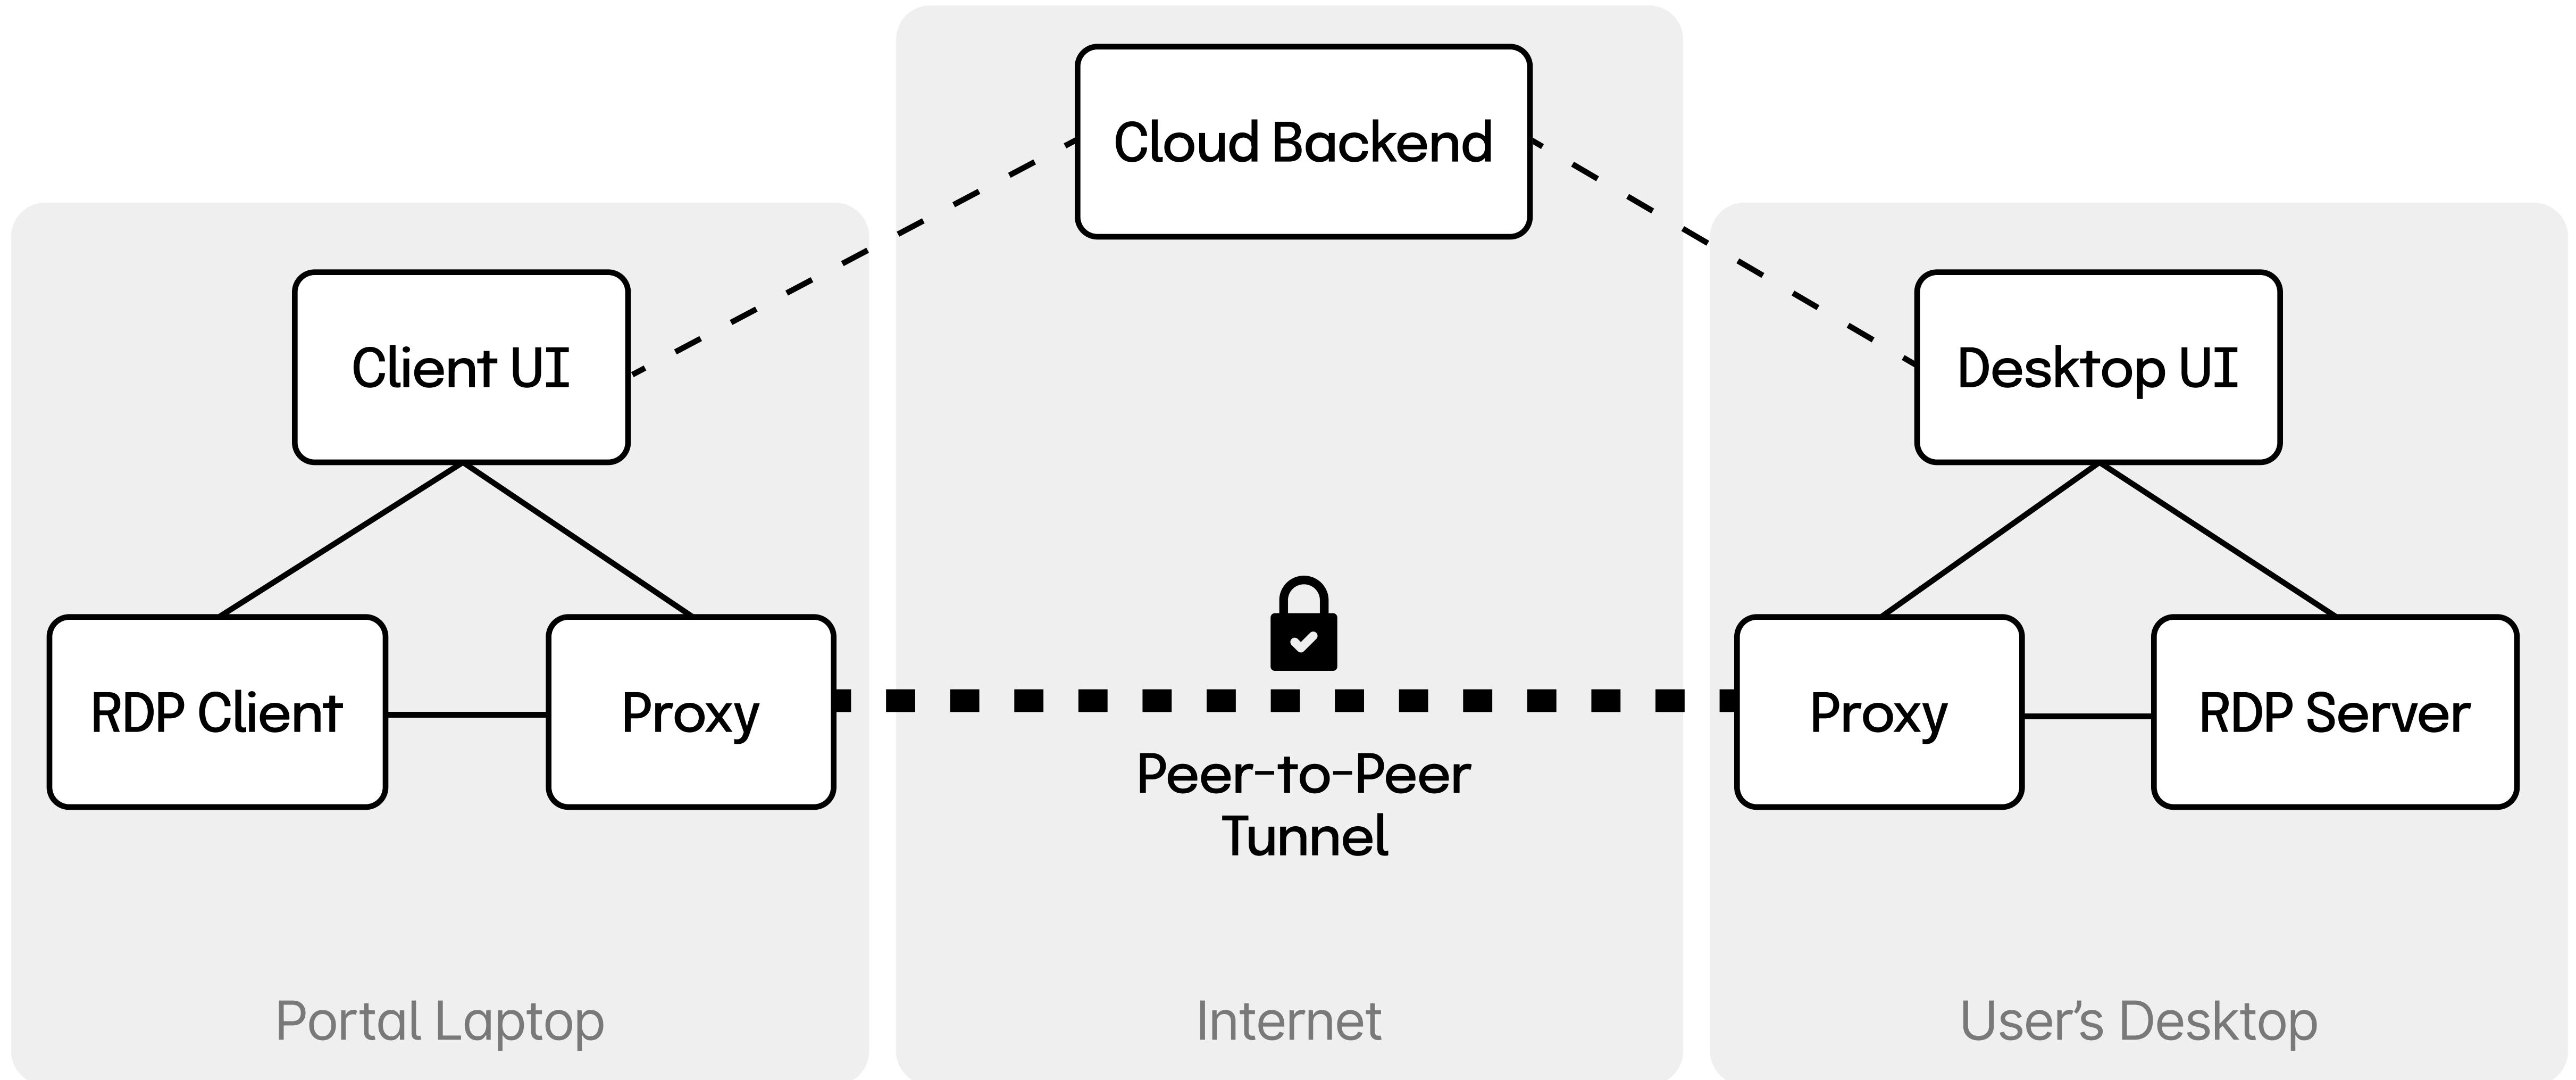

Other remote desktop software products monitor user activity to determine what to charge users. We don't.

4

No Subscription

Users own the connection to their desktop without having to pay monthly fees.

Our Architecture

Network Proxy

1

Peer-to-peer

Establishes peer-to-peer connection via hole punching allowing the portal laptop and users desktop to communicate.

2

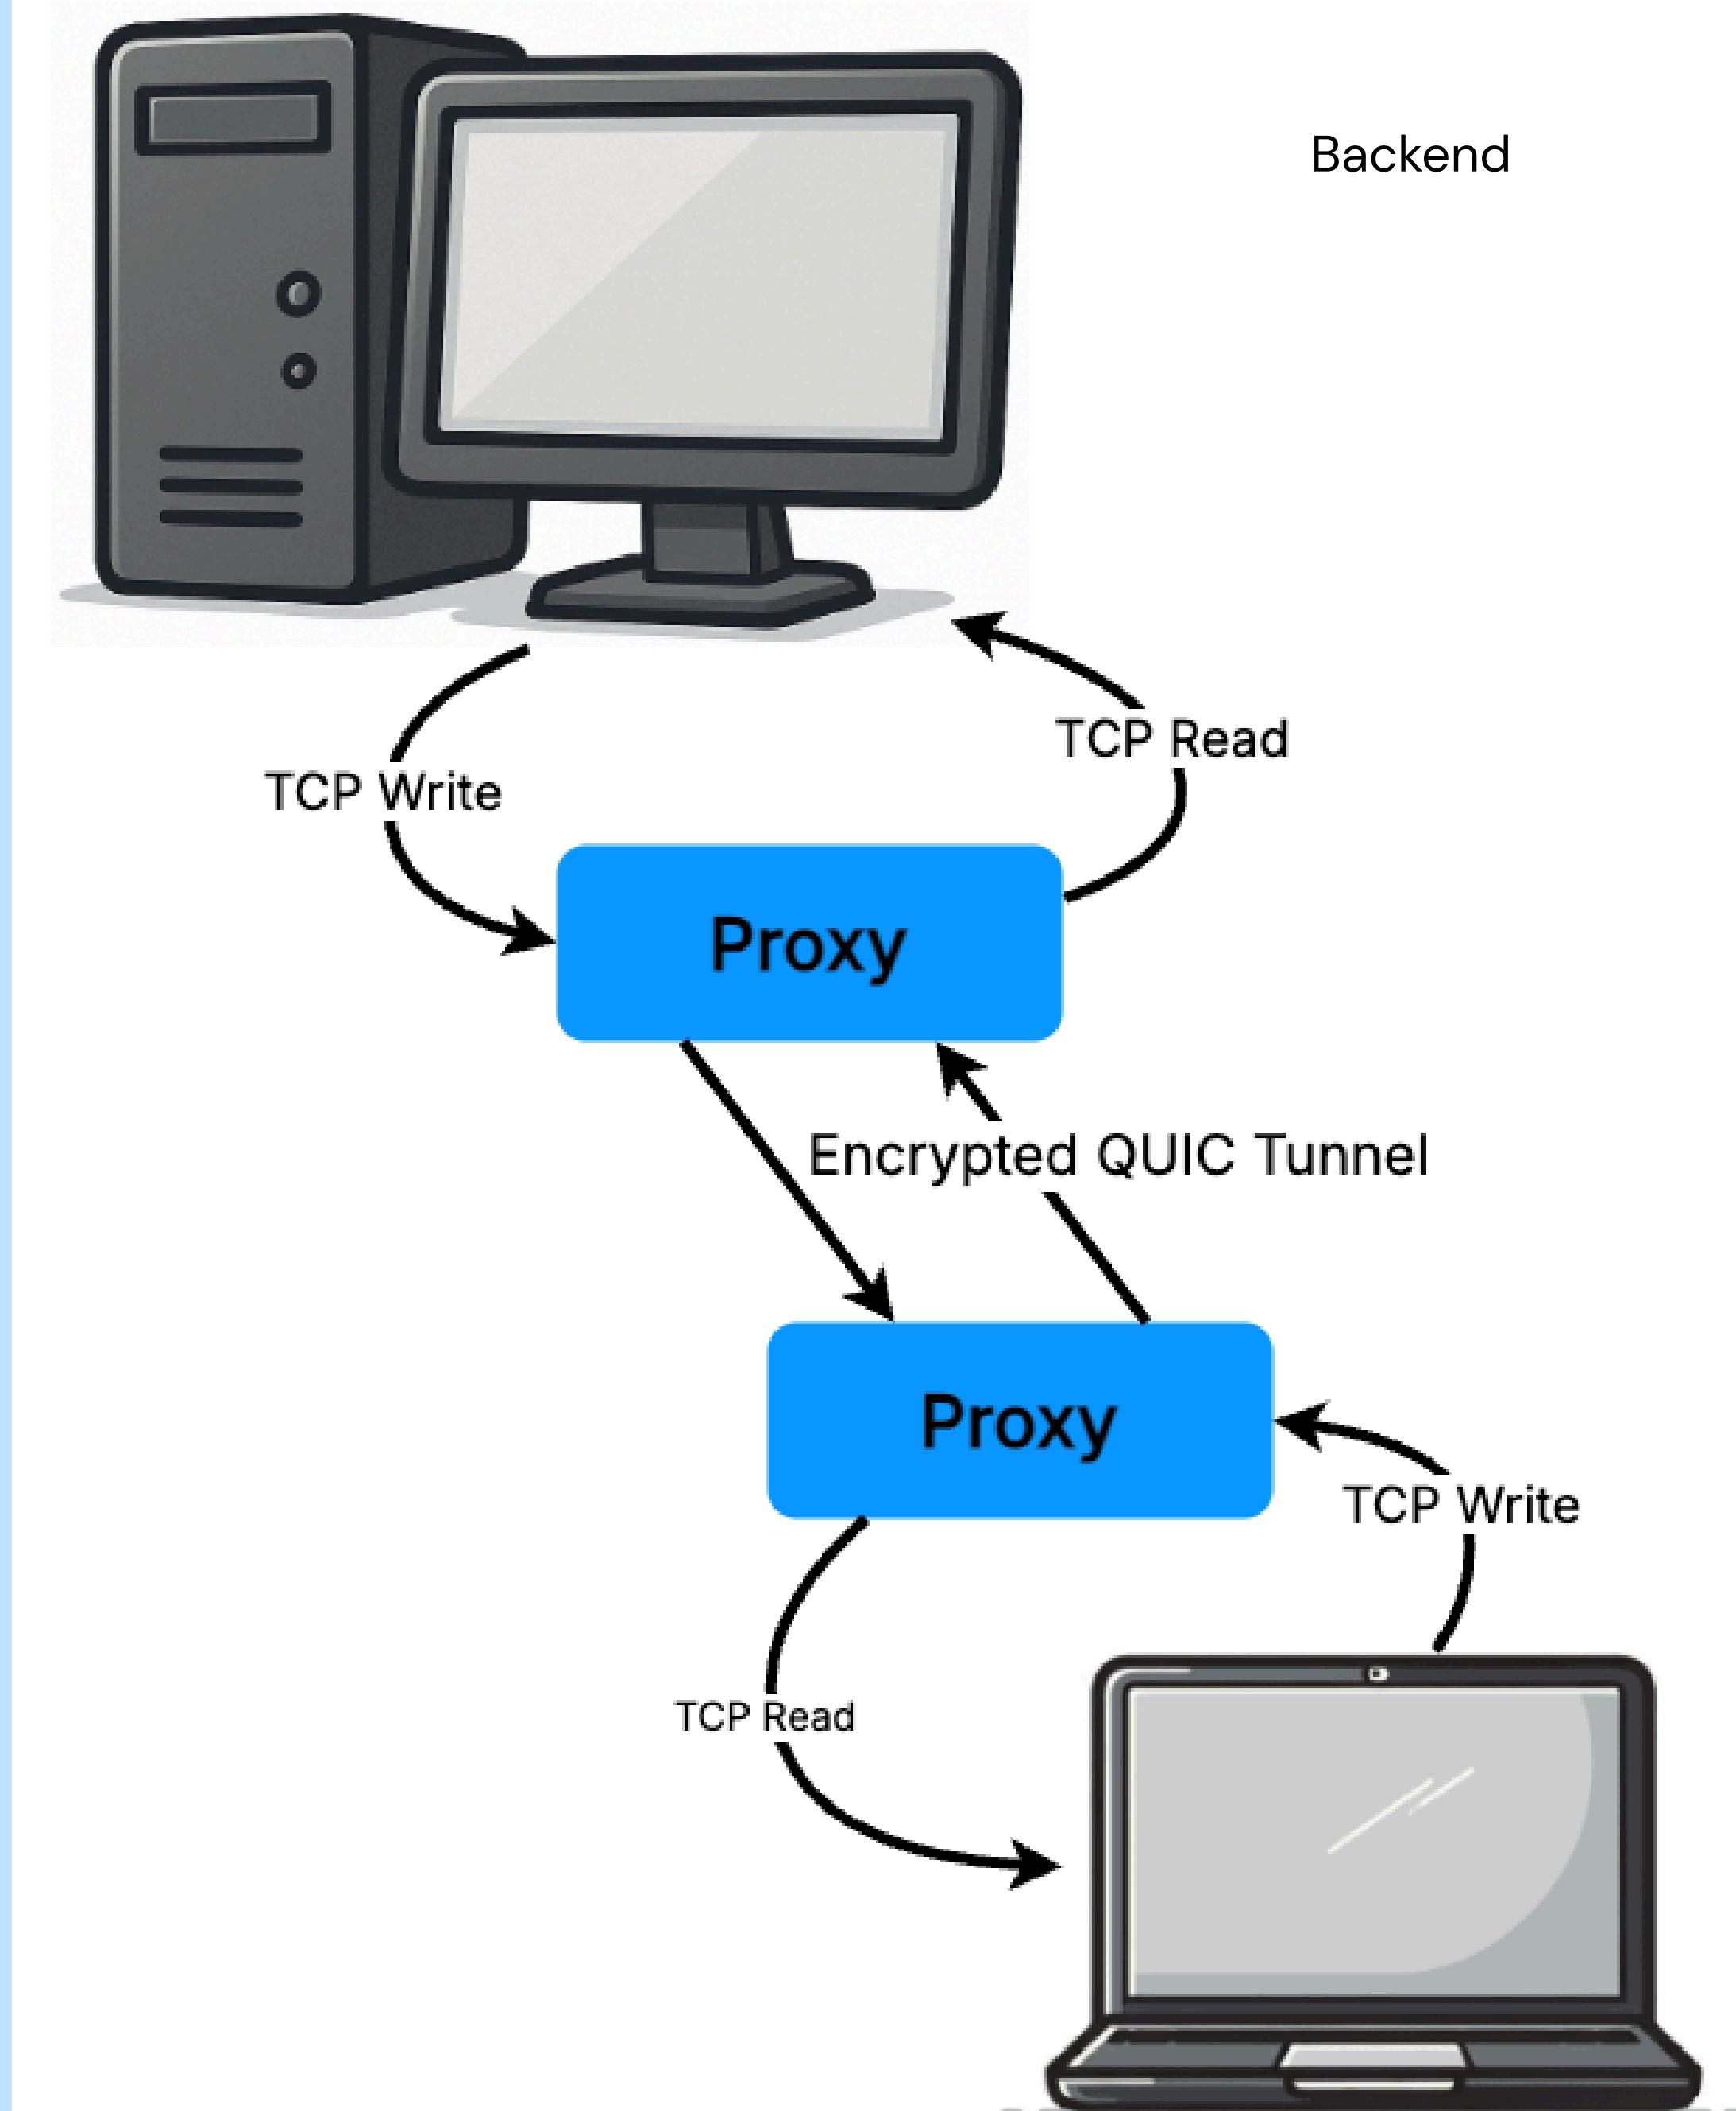

Encrypted

Utilizes a QUIC connection.

3

Dynamic Routing

Optimize latency by routing through relay servers if they perform better.

Backend

- **Database:**
 - Stores accounts and associated device addresses.
 - Keeps only necessary authentication information.

- **Cloud Server:**
 - Registers devices using Ed25519 keys.
 - Private keys securely stored on the device and never transmitted.
 - Assists in connection establishment, but remote desktop session flows directly peer-to-peer.

Desktop and Client UI

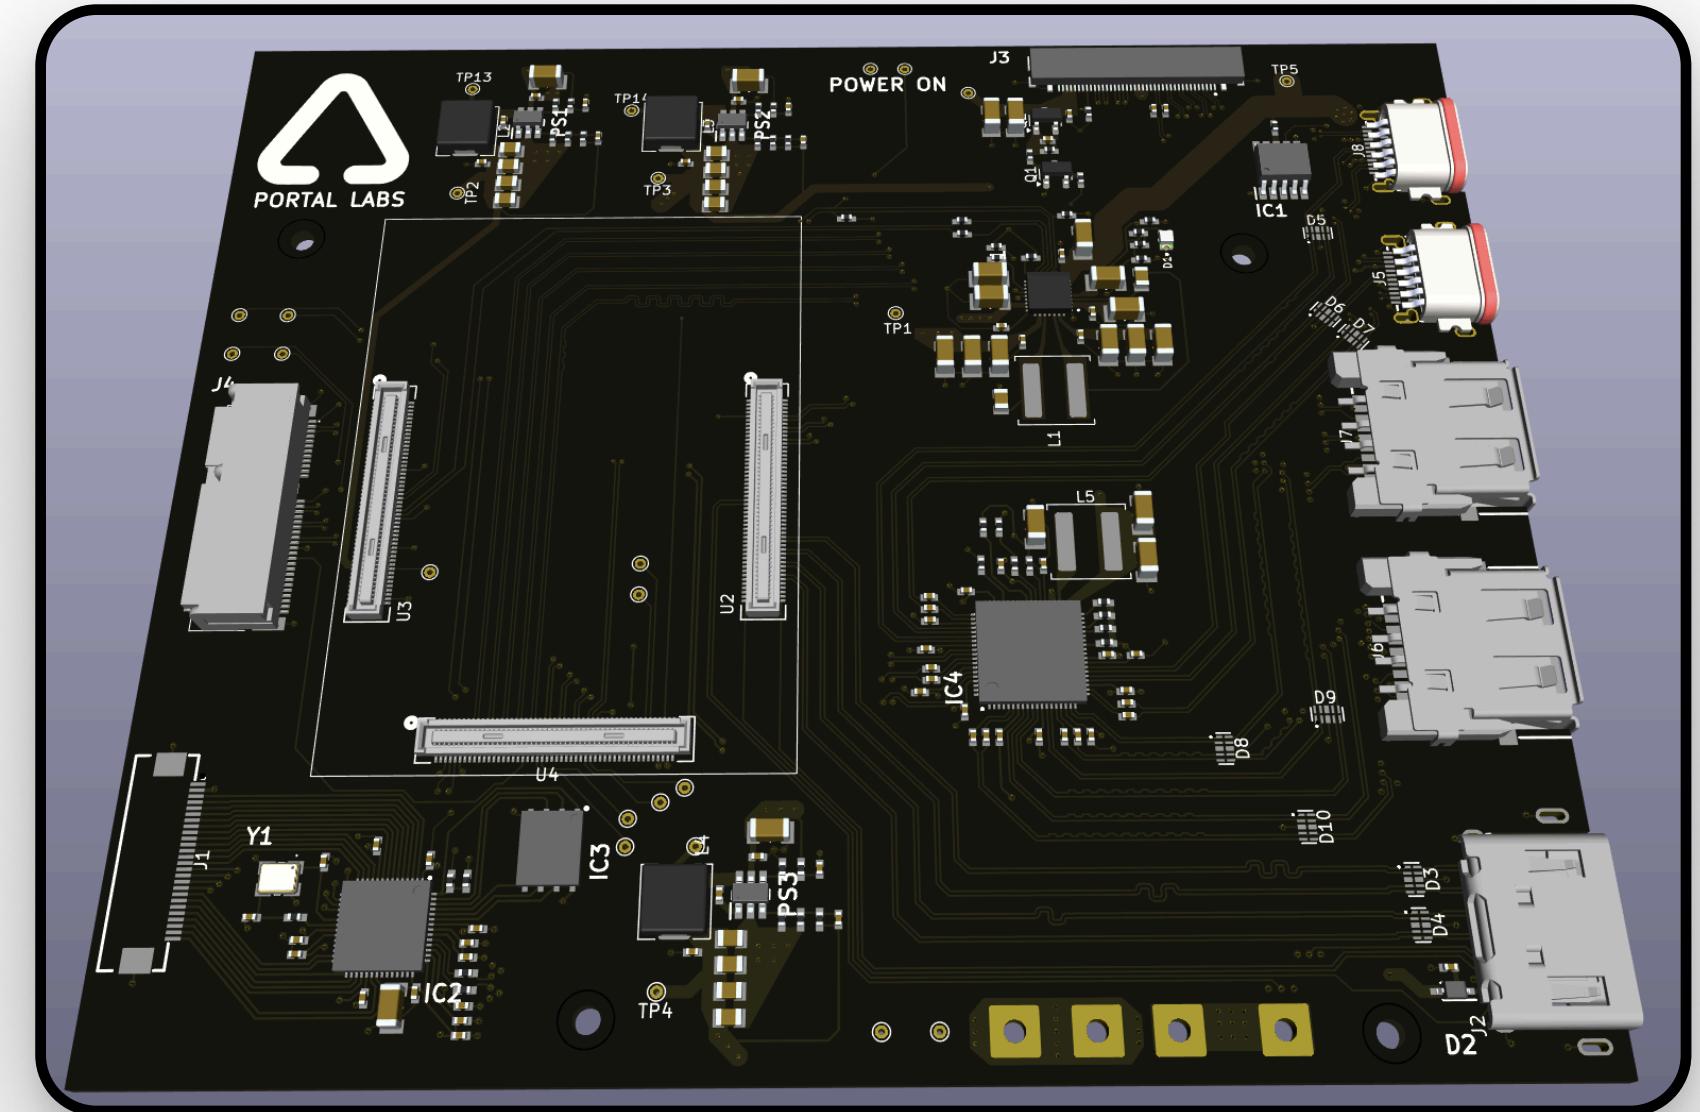

Minimal and User-Friendly

Focused on seamless, intuitive user experience.

Electrical

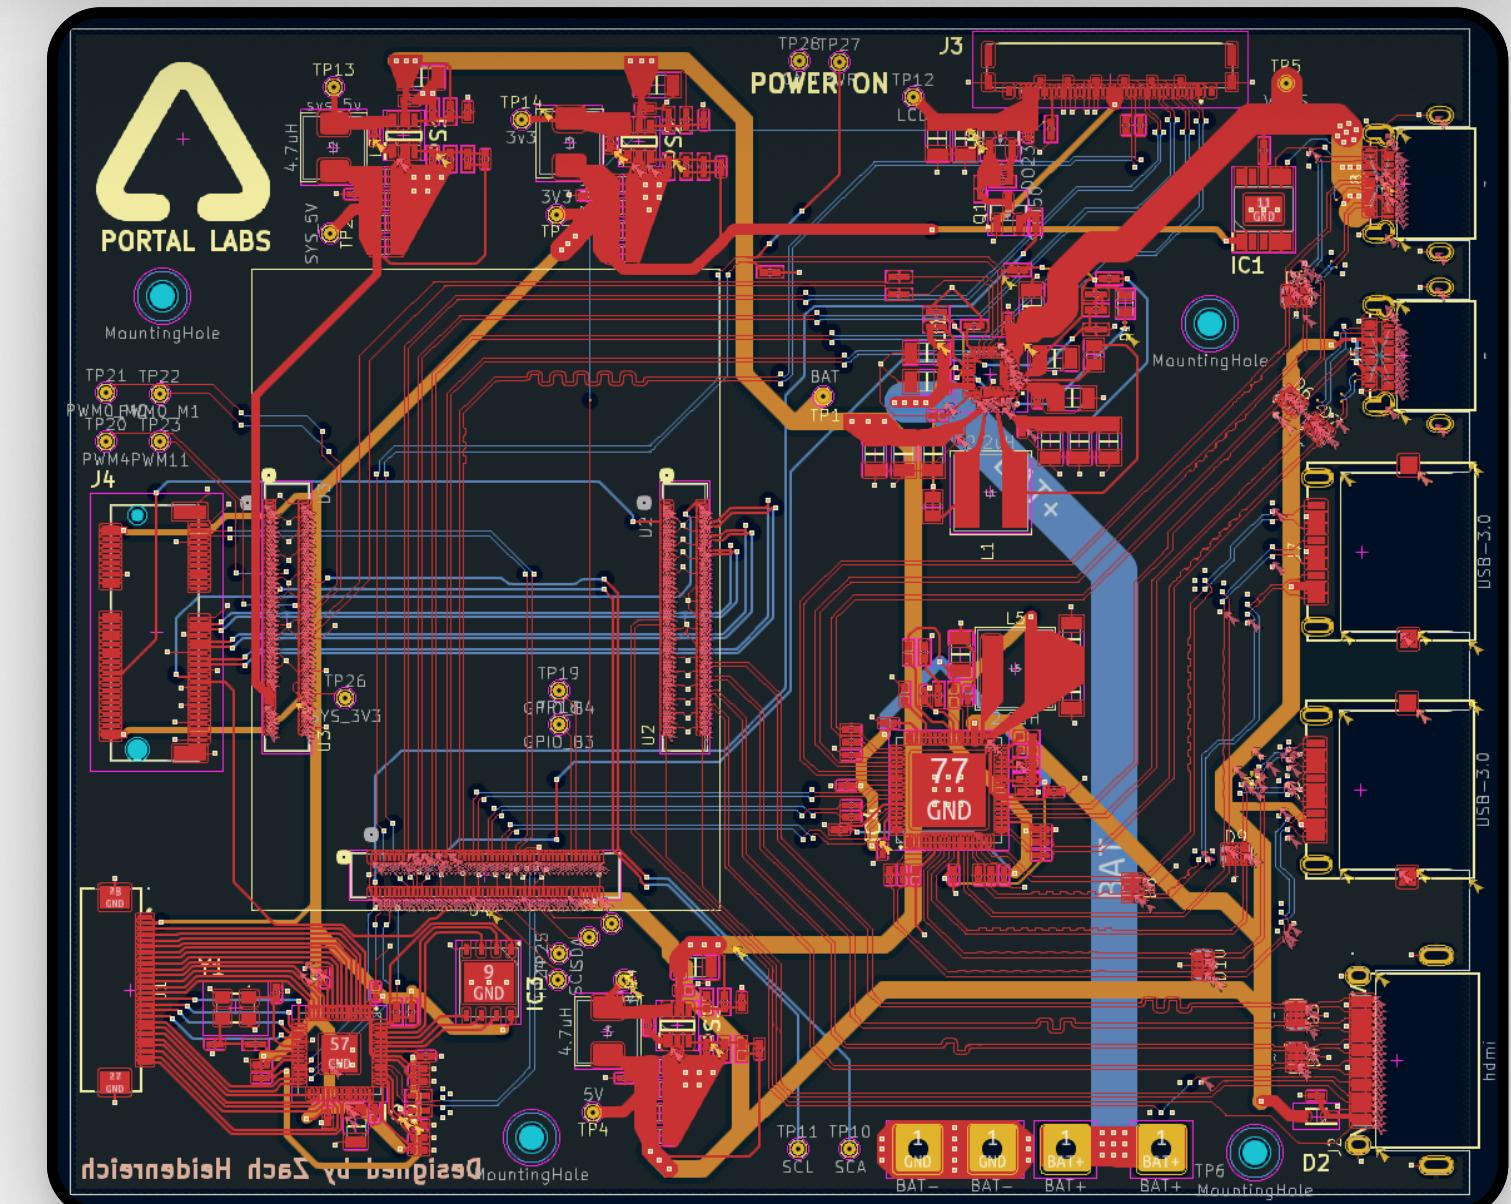

PCB

- High-Speed traces for HDMI, USB, and PCIe.
- >90% efficiency DC-DC converters.
- Test points for rapid prototype and development.

System Integration

- Display wired to eDP or HDMI.
- Antenna away from PCB allows for better Wi-Fi connection.

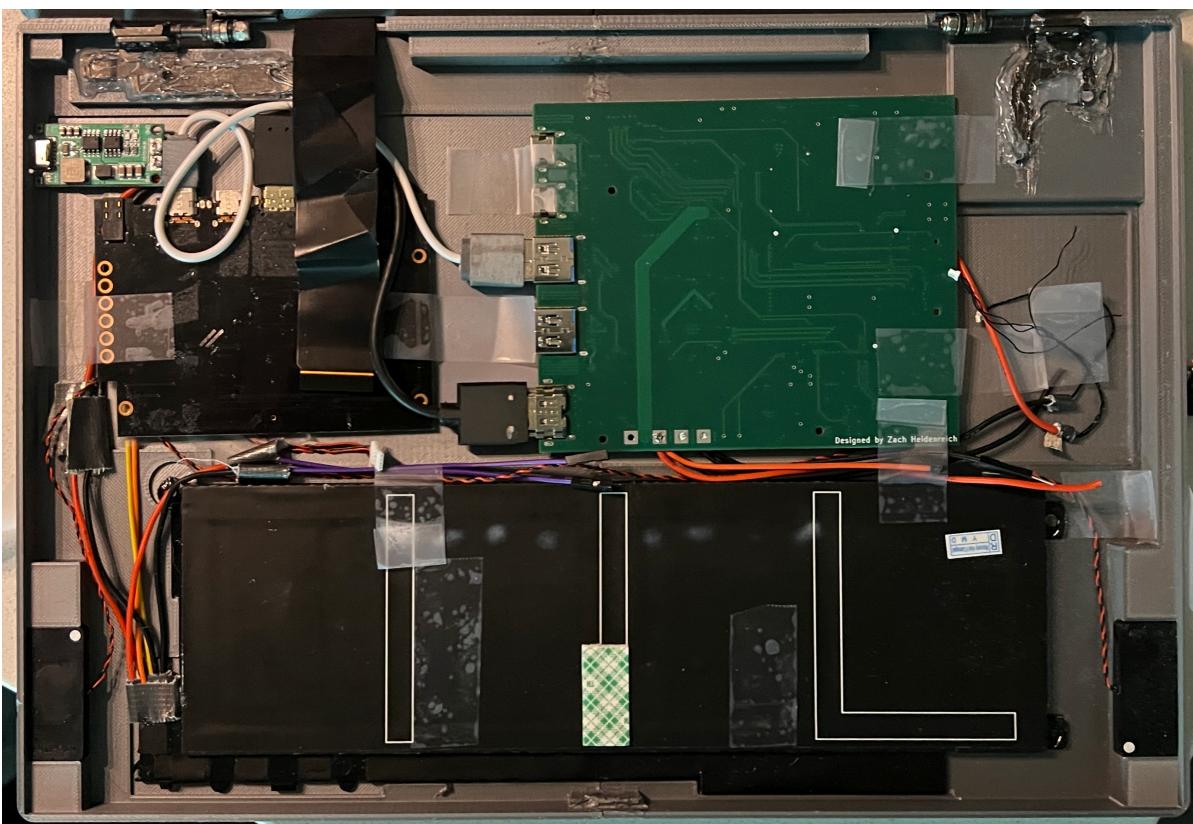

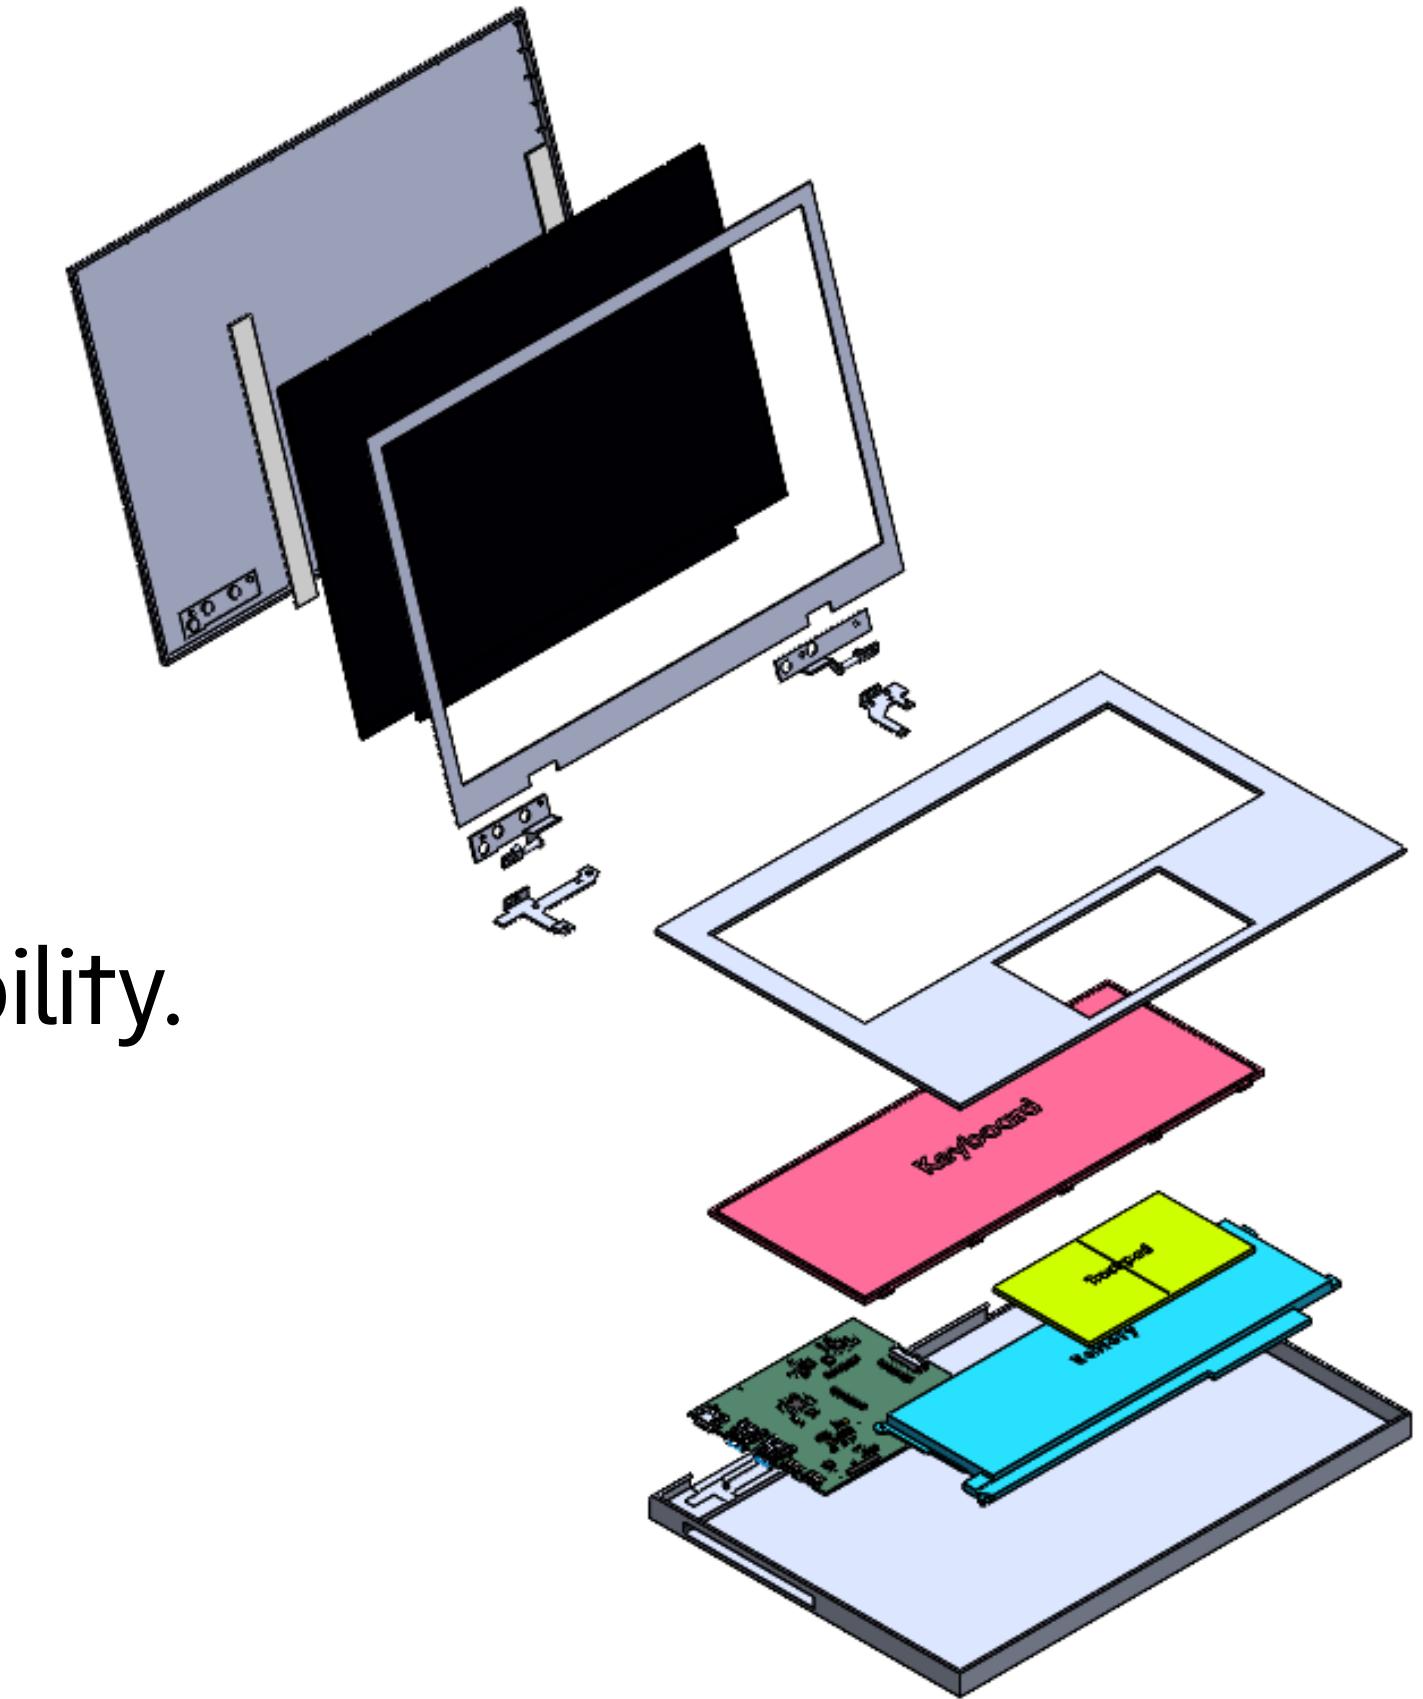

Mechanical

Final Iteration

- Final material selection – PETG.
- Optimized architecture with easier accessibility.
- 20% lighter than before.
- Improved hinge strength.
- Speaker is added and integrated.

Progressive Improvements

- Material: PLA → ASA → PETG
- Fitting: Snap-fit → Snap-fit + Adhesive + Screws
